

How my half of the course works

Biostatistics · BSc Genetics, UAB · Autumn 2026

David Castellano

14 September 2026

Two halves, one course

Marta takes you from descriptive statistics to regression: September to early November.

Me from 10 November: what you do once the basic toolkit is not enough.

Two halves, one course

Marta takes you from descriptive statistics to regression: September to early November.

Me from 10 November: what you do once the basic toolkit is not enough.

Same course, same exams, one continuous argument. But my sessions **run differently**, and this is what you need to know about that.

What my block covers

Theory · categorical data · logistic regression and GLMs · multiple testing · Bayesian inference · from regression to LLMs

Seminars · what a variance decomposition cannot tell you · causal inference and DAGs

Practicals · GLMs and multiple testing in R · Bayesian inference in R

What my block covers

Theory · categorical data · logistic regression and GLMs · multiple testing · Bayesian inference · from regression to LLMs

Seminars · what a variance decomposition cannot tell you · causal inference and DAGs

Practicals · GLMs and multiple testing in R · Bayesian inference in R

26 hours of my teaching · 10 theory · 4 seminar · 12 practical

What my block covers

Theory · categorical data · logistic regression and GLMs · multiple testing · Bayesian inference · from regression to LLMs

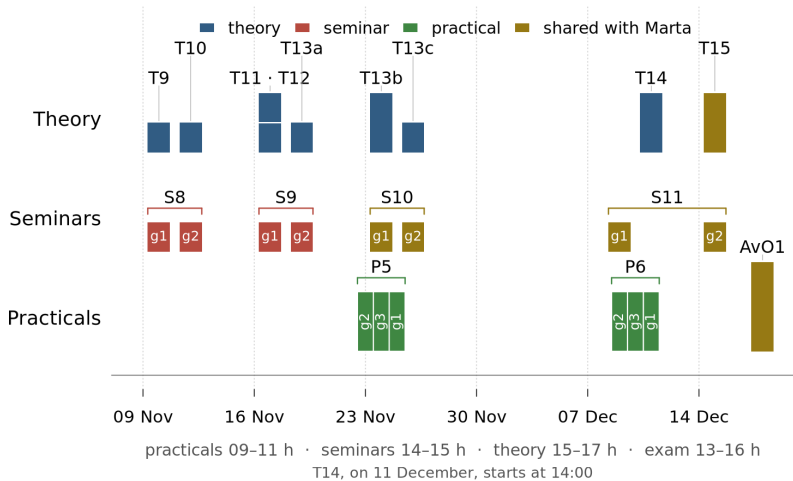

Seminars · what a variance decomposition cannot tell you · causal inference and DAGs

Practicals · GLMs and multiple testing in R · Bayesian inference in R

26 hours of my teaching · 10 theory · 4 seminar · 12 practical

16 hours of yours · 10 theory · 2 seminar · 4 practical
— the seminars run twice and the practicals three times, and you attend one of each.

The timeline

The one rule that matters

The one rule that matters

Slides and full notes, one week before every session.

Theory hours are exam simulations

Not a lecture. You have already read the material.

Theory hours are exam simulations

Not a lecture. You have already read the material.

Each hour: **four multiple-choice questions** and **one written question**, in exam conditions, then worked and argued.

Theory hours are exam simulations

Not a lecture. You have already read the material.

Each hour: **four multiple-choice questions** and **one written question**, in exam conditions, then worked and argued.

Same format as the real exam. The questions are **not** answerable from memory.

Seminars are debate tables

You read a paper and the notes. We spend the hour
arguing about them.

Seminars are debate tables

You read a paper and the notes. We spend the hour **arguing about them.**

S8 · Lewontin, 1974 — can a variance decomposition identify causes?

S9 · Causal inference and DAGs — what you do instead.

Seminars are debate tables

You read a paper and the notes. We spend the hour **arguing about them.**

S8 · Lewontin, 1974 — can a variance decomposition identify causes?

S9 · Causal inference and DAGs — what you do instead.
Two halves of one argument. Bring a position.

Practicals are two mornings in R

P5 · 23, 24 or 25 November — logistic regression and multiple testing

P6 · 9, 10 or 11 December — Bayesian inference

Practicals are two mornings in R

P5 · 23, 24 or 25 November — logistic regression and multiple testing

P6 · 9, 10 or 11 December — Bayesian inference

Same data in both. In P5 you fit it one way; in P6 you fit it the other and see what changes.

Practicals are two mornings in R

P5 · 23, 24 or 25 November — logistic regression and multiple testing

P6 · 9, 10 or 11 December — Bayesian inference

Same data in both. In P5 you fit it one way; in P6 you fit it the other and see what changes.

Something in P5 will **break**. Fixing it is P6.

What this asks of you

- ▶ **one hour of reading** before each session, every time
- ▶ turning up with a **position**, not just attendance
- ▶ being wrong out loud

What this asks of you

- ▶ **one hour of reading** before each session, every time
- ▶ turning up with a **position**, not just attendance
- ▶ being wrong out loud

What you get

- ▶ notes you can actually study from, a week early
- ▶ exam practice all term, on the real format, with feedback
- ▶ the tools that are actually used in genetics

Practical matters

Material · one week before each session

Language · Catalan — classes, notes and **the exam** · the **seminar hour runs in English** · technical terms in English throughout

Assessment · joint with Marta's half; my sessions are practice, not marks

Practical matters

Material · one week before each session

Language · Catalan — classes, notes and **the exam** · the **seminar hour runs in English** · technical terms in English throughout

Assessment · joint with Marta's half; my sessions are practice, not marks

Ask me things. Especially the questions you think are too basic.

First session

Tuesday 10 November

Seminar S8 at 14:00 · Theory T9 at 15:00

First session

Tuesday 10 November

Seminar S8 at 14:00 · Theory T9 at 15:00

Material in your hands on **3 November**.
